

Data Collection and Preprocessing Phase

Date	03 October 2026
Team ID	Not provided
Project Title	Food Ordering Behaviour and Consumer Trends
Maximum Marks	10 Marks

Data Exploration and Preprocessing Template

Identifies data sources, assesses quality issues like missing values and duplicates, and implements resolution plans to ensure accurate and reliable analysis.

Section	Description
Data Overview	The dataset contains 50,000 food-order records. The main fields used include City, Cuisine, Age Group, Restaurant Type, Meal Type, Company, Order Id, Order Value, Rating Given and Time Taken To Order. The project uses these fields to study food ordering behaviour and consumer trends.
Data Cleaning	The data was reviewed for missing values, duplicate Order Id records, inconsistent categorical labels and invalid numerical values before visualization. Only appropriate and valid records should be used for final aggregation.
Data Transformation	Tableau was used to group, filter and aggregate the data. COUNT(Order Id) was used for order volume, SUM(Order Value) for order-value contribution, and AVG(Rating Given) for customer ratings. City, Cuisine, Age Group, Restaurant Type, Meal Type and Company were used as dimensions.
Data Type Conversion	Order Id was treated as an identifier. City, Cuisine, Age Group, Restaurant Type, Meal Type and Company were treated as categorical dimensions. Order Value, Rating Given and Time Taken To Order were treated as numerical measures.
Column Splitting and Merging	No major column splitting or merging was required for the final Tableau analysis because the existing fields were sufficient for the required visualizations.

Data Modeling	The project uses the food-order dataset as the main data source. Tableau aggregations such as COUNT, SUM and AVG were used. No complex multi-table relationship was required for the dashboard.
Save Processed Data	The prepared dataset and Tableau workbook should be retained with the project documents so that the dashboard and story can be reviewed, updated and published.
