

Data Collection and Preprocessing Phase

Date	03 October 2026
Team ID	Not provided
Project Title	Food Ordering Behaviour and Consumer Trends
Maximum Marks	3 Marks

Data Quality Report Template

The Data Quality Report Template will summarize data quality issues from the selected source, including severity levels and resolution plans. It will aid in systematically identifying and rectifying data discrepancies.

Data Source	Data Quality Issue	Severity	Resolution Plan
Food Ordering Dataset	Missing values in fields used for grouping or aggregation should be checked.	Moderate	Check the relevant fields in the data source and handle missing records or values before final aggregation.
Food Ordering Dataset	Order Id is used to count orders, so duplicate records should be checked before interpreting COUNT(Order Id) as total orders.	Moderate	Check for exact duplicate records and verify Order Id records where required. Remove only confirmed duplicates.
Food Ordering Dataset	Categorical fields such as City, Cuisine, Meal Type, Company and Restaurant Type must use consistent labels.	Low	Standardize spelling, spaces and category labels if inconsistent values are found.
Food Ordering Dataset	Order Value, Rating Given and Time Taken To Order need suitable numerical data types.	Moderate	Validate field types and convert to numerical types where required before SUM or AVG operations.
Food Ordering Dataset	The dashboard uses COUNT(Order Id), SUM(Order Value) and AVG(Rating Given), so aggregation definitions must match the business question.	Low	Use the correct aggregation for each visualization and verify totals against the source dataset.
