

Project Initialization and Planning Phase

Date	03 October 2026
Team ID	Not provided
Project Title	Food Ordering Behaviour and Consumer Trends
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	To analyze food ordering behaviour and consumer trends and present clear visual insights about order volume, cuisine preferences, cities, meal types, company types, restaurant segments, ratings and order value.
Scope	The project covers descriptive and exploratory analysis of the provided 50,000-order dataset. It focuses on the fields available in the dataset and the visualizations created in Tableau. It does not include a real-time ordering application or production recommendation system.
The raw food-order records contain many categories and measures, making it difficult to identify useful patterns directly from individual records. A clear visual analysis is required to compare customer and ordering behaviour.	
Description	The project converts the food-order dataset into Tableau visualizations. The dashboard compares cities, cuisines, age groups, restaurant types, company types, meal types, ratings and order value.
Impact	The analysis makes large amounts of food-order data easier to understand and helps identify patterns in customer preferences, city-wise order volume, meal-type contribution, restaurant segments and customer ratings.
Create a Tableau dashboard and story titled Food Ordering Behaviour and Consumer Trends, using suitable charts and a KPI to present the major findings from the dataset.	
Approach	Collect and understand the dataset, inspect data quality, prepare the fields, create business questions, develop individual Tableau visualizations, combine them into a dashboard, create a story, record observations and publish the completed work on Tableau Public.

Key Features	Total Orders KPI; Flavors Across Cities heat map; Company Type and Meal Type stacked bar chart; Revenue Contribution by Meal Type pie chart; Age Group and Restaurant Segment bar chart; Customer Rating Analysis by Meal Type; Cities By Order Value treemap; Customer Preferences across Cuisines horizontal bar chart; dashboard and story.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware	Laptop/Desktop for Tableau development	Existing system suitable for Tableau
Computing Resources	Local processing and Tableau visualization	Standard laptop/desktop computing
Memory	RAM for loading the dataset and Tableau visualizations	Use available system RAM; no special allocation required
Storage	Dataset, Tableau workbook and project documents	Sufficient local storage for project files
Software	Tableau Public/Desktop and Microsoft Word	Tableau for analysis and visualization; Word for documentation
Frameworks	Not required	Not applicable
Libraries	Not required for the Tableau dashboard	Not applicable
Development Environment	Tableau Public/Desktop and document editor	Tableau workspace and local project documentation
Data	Food ordering dataset	50,000 food-order records; exact source file format not provided
