

Story

Date	03 October 2026
Team ID	Not provided
Project Name	Food Ordering Behaviour and Consumer Trends
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

- Story Title: Executive Summary – Food Ordering Behaviour and Consumer Trends
- Story Point 1 – Executive Overview: The analysis covers 50,000 food orders and combines order volume, cuisine, city, meal type, company type, restaurant segment, rating and order value.
- Story Point 2 – City and Cuisine: The heat map shows that cuisine order volume varies across different city-cuisine combinations.
- Story Point 3 – Age Group and Restaurant Segment: Gen 2 and Millennial show higher displayed order volumes than Adults and Child, while restaurant segment counts within groups are relatively close.

Activity 2:

Publish Story on Tableau Public and Paste Public link below

Project Story Points and Observations

- Executive Overview – 50,000 food orders are analyzed to understand overall food ordering behaviour and consumer trends.
- City and Cuisine – The Flavors Across Cities heat map compares cuisine order volume across Bangalore, Chandigarh, Delhi, Hyderabad, Mumbai and Pune.
- Age Group and Restaurant Segment – The grouped bars compare Adults, Child, Gen 2 and Millennial across Budget, Mid-range and Premium restaurant types.
- Cuisine Preferences – The horizontal bar chart compares customer order volume across Biryani, Chinese, Desserts, Fast Food, North Indian and South Indian.
- Company and Meal Type – The stacked bars compare Alone, Family, Friends and Partner across Breakfast, Dinner, Lunch and Snacks.
- Customer Ratings – Average ratings are close to 3.0 across Breakfast, Dinner, Lunch and Snacks.
- City-wise Order Volume – The treemap compares order counts across six cities: Mumbai 8,443; Pune 8,354; Bangalore 8,353; Delhi 8,309; Chandigarh 8,279; Hyderabad 8,262.
- Revenue Contribution – Breakfast 25.2852%, Snacks 25.0507%, Lunch 25.0307% and Dinner 24.6334% of total Order Value.
- Final Summary – The story brings the dashboard findings together and shows how Tableau converts the food-order records into clear comparisons of customer behaviour and ordering trends.
